

Netflix Movies and TV Shows Data Analysis

Prepared By: Namrata Gupta

Date: 17/05/2026

Project Overview: This project is based on analyzing the Netflix Movies and TV Shows dataset using SQL. The dataset contains details such as title, type, genre, country, release year, rating, and duration of Netflix content.

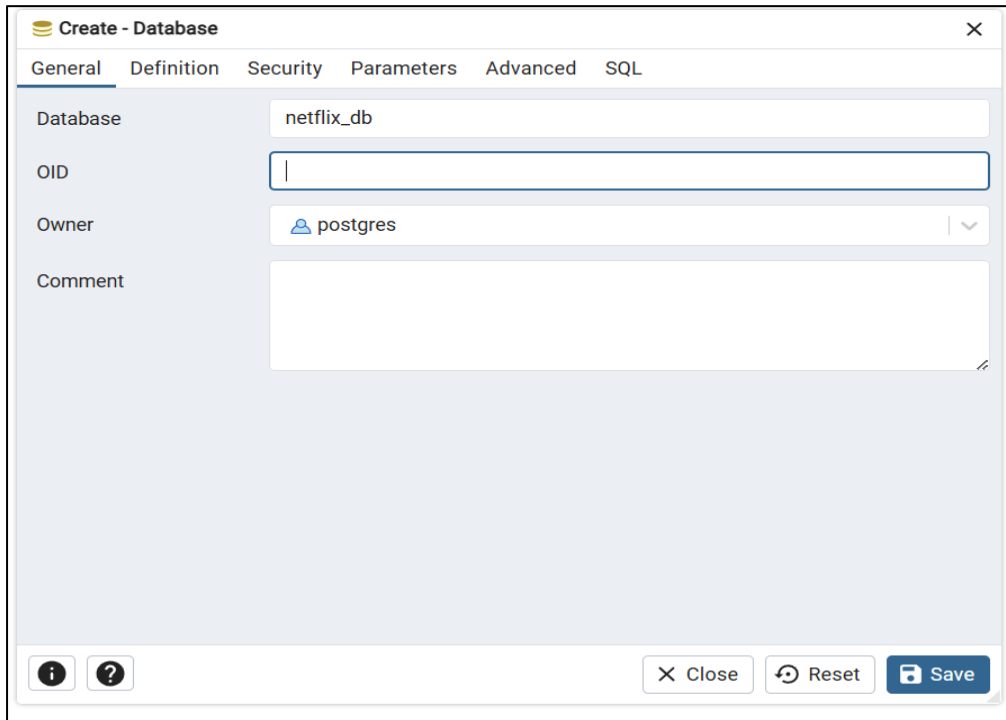

The main objective of this project is to explore and analyze the data to extract meaningful insights using SQL queries. It helps in understanding the distribution of movies and TV shows, identifying popular genres, and observing content trends over different years.

SQL operations such as filtering, grouping, and aggregation are used to perform the analysis and derive useful conclusions from the dataset.

Dataset Information: The dataset used in this project is taken from Kaggle and contains details of Netflix shows and movies including title, director, cast, country, release year, rating, and duration.

Practical Implementation of SQL Queries

Database creation:

The screenshot shows a 'Create - Database' window with the following fields and values:

- Database: netflix_db
- OID: (empty)
- Owner: postgres
- Comment: (empty)

At the bottom of the window, there are three buttons: 'Close', 'Reset', and 'Save'.

Table Creation:

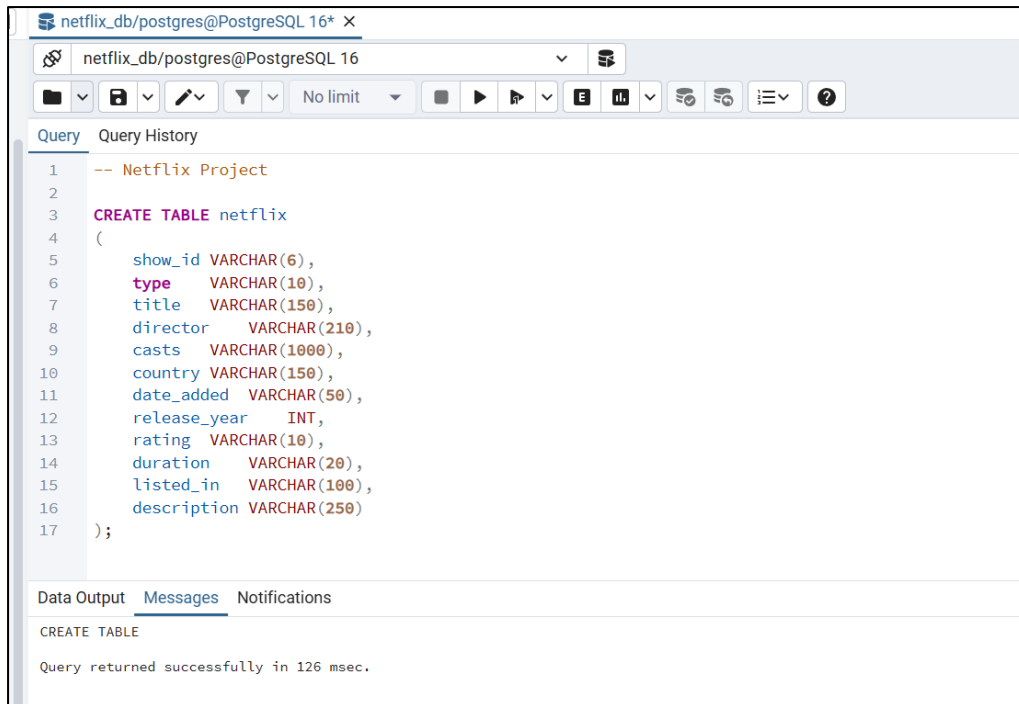

-- Netflix Project

CREATE TABLE netflix

(

 show_id VARCHAR(6),
 type VARCHAR(10),
 title VARCHAR(150),
 director VARCHAR(210),
 casts VARCHAR(1000),
 country VARCHAR(150),
 date_added VARCHAR(50),
 release_year INT,
 rating VARCHAR(10),
 duration VARCHAR(20),
 listed_in VARCHAR(100),
 description VARCHAR(250)

);

Data Import:

Right click on table → Click Import/Export Data.

Import/Export data - table 'netflix'

General
Options
Columns

Header
☒

Freeze
☐

Requests copying the data with rows already frozen, just as they would be after running the VACUUM FREEZE command.

Delimiter
,

Specifies the character that separates columns within each row (line) of the file. The default is a tab character in text format, a comma in CSV format. This must be a single one-byte character. This option is not allowed when using binary format.

Quote
"

Specifies the quoting character to be used when a data value is quoted. The default is double-quote. This must be a single one-byte character. This option is allowed only when using CSV format.

Escape
'

Specifies the character that should appear before a data character that

4. Find the top 5 countries with the most content on Netflix.

Note:

In the first row, we have different combinations of countries. However, we can see rows for those combinations. Because of this, there is a possibility that many movies were released only in Australia and also not in Australia, the United Kingdom, and Canada together.

So first, we need to solve this problem. In one column, we have multiple country names stored together. We need to split these countries into separate rows. After that, we can check each country individually, calculate the total count, and find the top 5 countries for English content.

```
65
66 SELECT
67     country,
68     COUNT(show_id) as total_content

Total rows: 2676 Query complete 00:00:00.168 CRLF Ln 49, Col 22

- We used `SPLIT_PART()` because the duration column contains both number and text together, such as 7 Seasons or 3 Seasons.
- To check shows with more than 5 seasons, we first need to extract only the numeric part from the duration column.
- Therefore, we split the value using space and take the first part, which contains the number of seasons.

Syntax: -

`SPLIT_PART(column_name, separator, part_number)`

Explanation

- `column_name`
→ The string to split.
- `separator`
→ The character used for splitting.
- `part_number`
→ Specifies which part to return after splitting.

Example

- `SPLIT_PART('7 Seasons', ' ', 1)`
- Output: 7

```

SELECT *
FROM netflix
WHERE
    type = 'TV Show'
AND
    SPLIT_PART(duration, ' ', 1)::numeric > 5

13. Find how many movies actor 'Salman Khan' appeared in last 10 years.

```
SELECT * FROM netflix
```

```
WHERE
```

```
casts ILIKE '%Salman Khan%'
```

```
AND
```

```
release_year > EXTRACT(YEAR FROM CURRENT_DATE) - 10
```

The screenshot shows a SQL query editor with a query history pane on the left. The query is: `-- 13. Find how many movies actor 'Salman Khan' appeared in last 10 years.`
`SELECT * FROM netflix`
`WHERE`
`casts ILIKE '%Salman Khan%'`
`AND`
`release_year > EXTRACT(YEAR FROM CURRENT_DATE) - 10`

The results pane shows a table with columns: `casts` (character varying (1000)), `country` (character varying (150)), and `date` (date). The first row shows: `Salman Khan`, `India`, and `2019-01-01`.

Total rows: 1 | Query complete 00:00:00.185 | CRLF | Ln 98, Col 1

Explanation

- `SELECT * FROM netflix`
→ Retrieves all columns from the Netflix table.
- `casts ILIKE '%Salman Khan%'`
→ Searches for records where the casts column contains the name “Salman Khan”.
- `ILIKE`
→ Performs case-insensitive matching, so it matches:
 - Salman Khan
 - salman khan
 - SALMAN KHAN
- `%Salman Khan%`
→ % is a wildcard that means any characters before or after the text.
It checks whether “Salman Khan” exists anywhere in the casts column.
- `AND`
→ Both conditions must be true.
- `EXTRACT(YEAR FROM CURRENT_DATE)`
→ Extracts the current year from the system date.
- `- 10`
→ Calculates the last 10 years.
- `release_year > EXTRACT(YEAR FROM CURRENT_DATE) - 10`
→ Filters content released within the last 10 years.

Example:

If the current year is 2026:

EXTRACT(YEAR FROM CURRENT_DATE) - 10

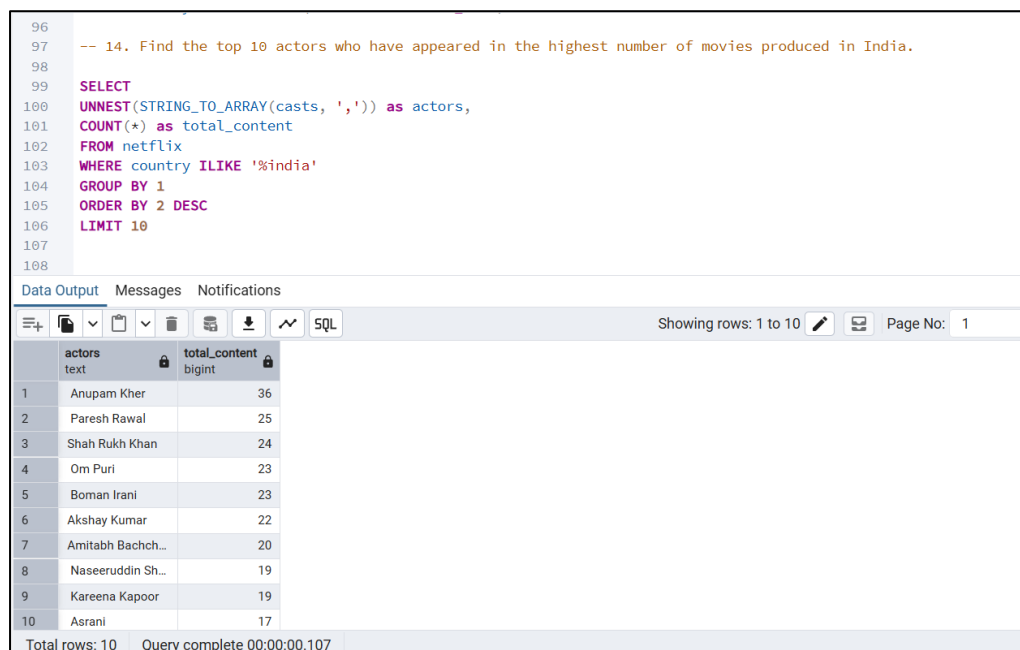

= 2026 - 10

= 2016

- release_year > 2016
→ Returns content released after 2016.

14. Find the top 10 actors who have appeared in the highest number of movies produced in India.

```
SELECT
UNNEST(STRING_TO_ARRAY(casts, ',')) as actors,
COUNT(*) as total_content
FROM netflix
WHERE country ILIKE '%india'
GROUP BY 1
ORDER BY 2 DESC
LIMIT 10
```

The screenshot shows a SQL query execution interface. The query is as follows:

```
-- 14. Find the top 10 actors who have appeared in the highest number of movies produced in India.

SELECT
UNNEST(STRING_TO_ARRAY(casts, ',')) as actors,
COUNT(*) as total_content
FROM netflix
WHERE country ILIKE '%india'
GROUP BY 1
ORDER BY 2 DESC
LIMIT 10
```

The results are displayed in a table with the following columns: actors (text) and total_content (bigint). The table shows the top 10 actors based on the number of movies they have appeared in, ordered by total_content in descending order.

	actors	total_content
1	Anupam Kher	36
2	Paresh Rawal	25
3	Shah Rukh Khan	24
4	Om Puri	23
5	Boman Irani	23
6	Akshay Kumar	22
7	Amitabh Bachch...	20
8	Naseeruddin Sh...	19
9	Kareena Kapoor	19
10	Asrani	17

Total rows: 10 Query complete 00:00:00.107

15. Categorize the content based on the presence of the keywords 'Kill' and 'violence' in the description field. Label content containing these keywords as 'Bad' and all other content as 'Good'. Count how many items fall into each category.

WITH new_table

AS

(

SELECT

```

*,
CASE
    WHEN
        description ILIKE '%kill%' OR
        description ILIKE '%violence%' THEN 'Bad Content'
    ELSE 'Good Content'
END category
FROM netflix
)
SELECT
    category,
    COUNT(*) as total_content
FROM new_table
GROUP BY 1

```

The screenshot displays a SQL query editor with a query history tab. The query is as follows:

```

-- 15. Categorize the content based on the presence of the keywords 'Kill' and 'violence' in
the description field. Label content containing these keywords as 'Bad' and all other
content as 'Good'. Count how many items fail into each category.

WITH new_table
AS
(
    SELECT
        *,
        CASE
            WHEN
                description ILIKE '%kill%' OR
                description ILIKE '%violence%' THEN 'Bad Content'
            ELSE 'Good Content'
        END category
    FROM netflix
)
SELECT
    category,
    COUNT(*) as total_content
FROM new_table
GROUP BY 1

```

Below the query editor, the 'Data Output' tab shows the results of the query. The results are displayed in a table with two columns: 'category' and 'total_content'.

category	total_content
Good Content	8465
Bad Content	342

The status bar at the bottom indicates 'Total rows: 2' and 'Query complete 00:00:00.146'.

16. Find all content with rating 'TV-MA'

```

SELECT
    *
FROM netflix
WHERE
    TO_DATE(date_added, 'Month DD, YYYY') >= CURRENT_DATE - INTERVAL '5 years'

```
